Cloud Migration with Cloud Kinetics

Clients choose **Cloud Kinetics** to migrate & thrive in the cloud

Real-World Cloud Expertise

300+ successful cloud migrations with referenceable architectures

Multi-cloud expertise

- Premier / Gold partner for AWS, GCP, Microsoft Azure

"Right-shoring" delivery model

- 3x Centres of Excellence & NOCs
- Cloud discovery tools to drive adoption

Cloud Specialist MSP

400+ certifications in complex cloud migrations

Many cloud-firsts in the region

- Amazon Connect & Amazon Forecast
- First with VMWare Cloud
- Storage competency on AWS/GCP
- Blockchain on Azure
- Nokia OSS on Cloud

Platform Approach

Arcus™ Smart Cloud Management

- Hybrid & multi-cloud management
- AdvSpend analytics/FinOps
- Cost forecasting
- DevOps
- API framework

Highly automated Terraform templates to deploy IaC

- Single pane for events across infra & cloud apps

Hybrid Ecosystem

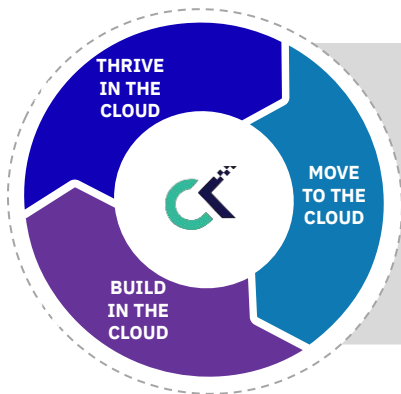

Hybrid competency & partnerships

- VMWare Solutions & PSO partner
- NetApp CDP & TPM
- Veeam, Druva, IBM partner

Direct Connect / Express route with AWS, Azure & GCP

Deep partnership with DC & network providers like Equinix, BDx, GTT, HGC & Lightstorm

Execute your hybrid & multi-cloud adoption journey seamlessly

ASSESS

Evaluate your IT landscape or workloads

PLAN

Plan what can move, what should move & in what order

MOBILIZE, MIGRATE & MODERNIZE

Pick the best-fit path & execute

OPTIMIZE

Optimize your operations continually, for security, cost & performance

Drive business outcomes and transformation in culture

Ignite large-scale transformation

Make a compelling case for change

Build preparedness and proficiency through experience

ASSESS & PLAN

We help you choose a migration plan that suits your business needs

Set-up & Security

Centralized Logging

Pilot Migration

Accelerated/Phased Migration Approach

Modernization

Process

- Proven migration methods
- Roadmap & migration strategy
- Compliance to industry & CSP best practices
- Project governance

Tools

- Tool-driven approach
- In-depth knowledge of CSP & third-party migration tools
- Questionnaires & checklists

Infra-as-Code

- IaC driven resource provisioning
- Pre-defined templates for landing zone, network & security setup

Revamp

- Redesign/ Replatform Applications & Infrastructure
- Modernize applications with Containerization, Serverless, Cloud PaaS
- Operate & Optimize

OPTIMIZE

Keep an eye on efficiency and ROI with optimization

Agriculture Success Stories

Power BI Reporting For Azure Consumption: Agriculture

An agricultural cooperative base in the US with a primary focus on dairy products, they delivers seed, crop protection products, agricultural services, and agronomic insights to agricultural retailers

Challenge

- Departments of the Customer had hosted their resources on Azure Cloud and are submitting their consumption bills separately to the Corporate office for payments
- The Corporate team only has an overview of the Azure consumption from data directly retrieved from the Azure portal

Solution

- Using PowerBI Dashboard
- Extract Azure resources usage periodically from the subscriptions under the Customer's Azure account
- Provided Customer with the ability to perform ad-hoc queries on the data
- Data are classified and grouped by tag to be leveraged by PowerBI
- Authentication with Service Principal registered with Azure active directory

Success Meter

AUTOMATED RETRIEVAL:

- Data retrieval engine set to run on a specific date with multiple retries

COST OBSERVABILITY:

- Azure usage & cost per resource tracked and validated
- Cost per Azure subscription per team provided visually to the stakeholders

COST VISUALIZATION:

- Visualize the spent trend to better plan more efficiently with PowerBI
- Access control mechanism implemented on the reporting solution using custom-built roles

Enhancing Digital Agriculture With Reliable Cloud Managed Services

PT EAST WEST SEED INDONESIA (EWINDO) produces healthy vegetable seeds with high genetic purity & good germination through plant breeding

Challenge

- Need support on maintaining application stability
- Accommodate rapid changes on the Cloud so they could commit to their core business focus

Solution

- Deployed a highly scalable application
- Integrated monitoring tools, logging, and trace managed services
- Provided multi-tiered support for IT operation and sent periodic reports
- Provided Support Engineer backed by AWS, with committed fast response time to ensure nearly no downtime for the application.

Success Meter

HIGH AVAILABILITY:

- 99.9% application uptime SLA and minimum downtime supported by 24/7 IT Experts

SCALABILITY:

- Highly scalable application ensuring optimal performance in case of demand increase

PROCESS:

- Centralized, cloud-based monitoring for fast reaction to application events

Cloud Backup & Disaster Recovery For An Agribusiness

The customer is a state-owned manufacturing enterprise involved in the production and trading of fertilizers, petrochemicals, agrochemicals, and other agricultural products

Challenge

- Urgent need for a dependable data backup and disaster recovery (DR) solution.
- Safeguarding their data against the threat of cyber attacks, particularly ransomware
- Ensuring their operations wouldn't be significantly disrupted if an attack occurred.

Solution

- Implemented comprehensive AWS Cloud Backup and Disaster Recovery (DR) solution.
- Cloud storage repositories: Protect crucial data in the cloud protected
- Databases: vital business data stored in various database management systems
- Applications: Protect the functionality of essential business apps
- Virtual Machines (VMs) running on Compute Engine, VMware Engine, on-premises VMware environments
- File systems: Safeguards important data organized within file systems

Success Meter

SWIFT DEPLOYMENT :

- 90+ workload instances were secured within 3 weeks

OPTIMIZED BACKUP:

- Incrementally transmit and store data over time for significantly reduce network bandwidth usage and storage consumption

ENHANCED RECOVERY

- Under 1 minute of critical data restoration and recovery, downtime are minimized, operational continuity are maintained

AWS-Based Data Platform Precision Agriculture

Modern Data Platform

1

Data Storage

- A centralised storage for structured and unstructured data, such as relational databases, Data Lakes, Data Warehouses and Data Lake Houses.

2

Data Processing

- Tools and technologies for processing and transforming data, such as data ingestion, data wrangling, and batch and real-time processing.

3

Data Visualisation

- Tools and dashboards for visualising data, enabling your users to gain insights and make informed decisions.

4

Data Governance

- Features for data management, such as data security, data privacy, data quality, metadata management, and data lineage.

5

Machine Learning

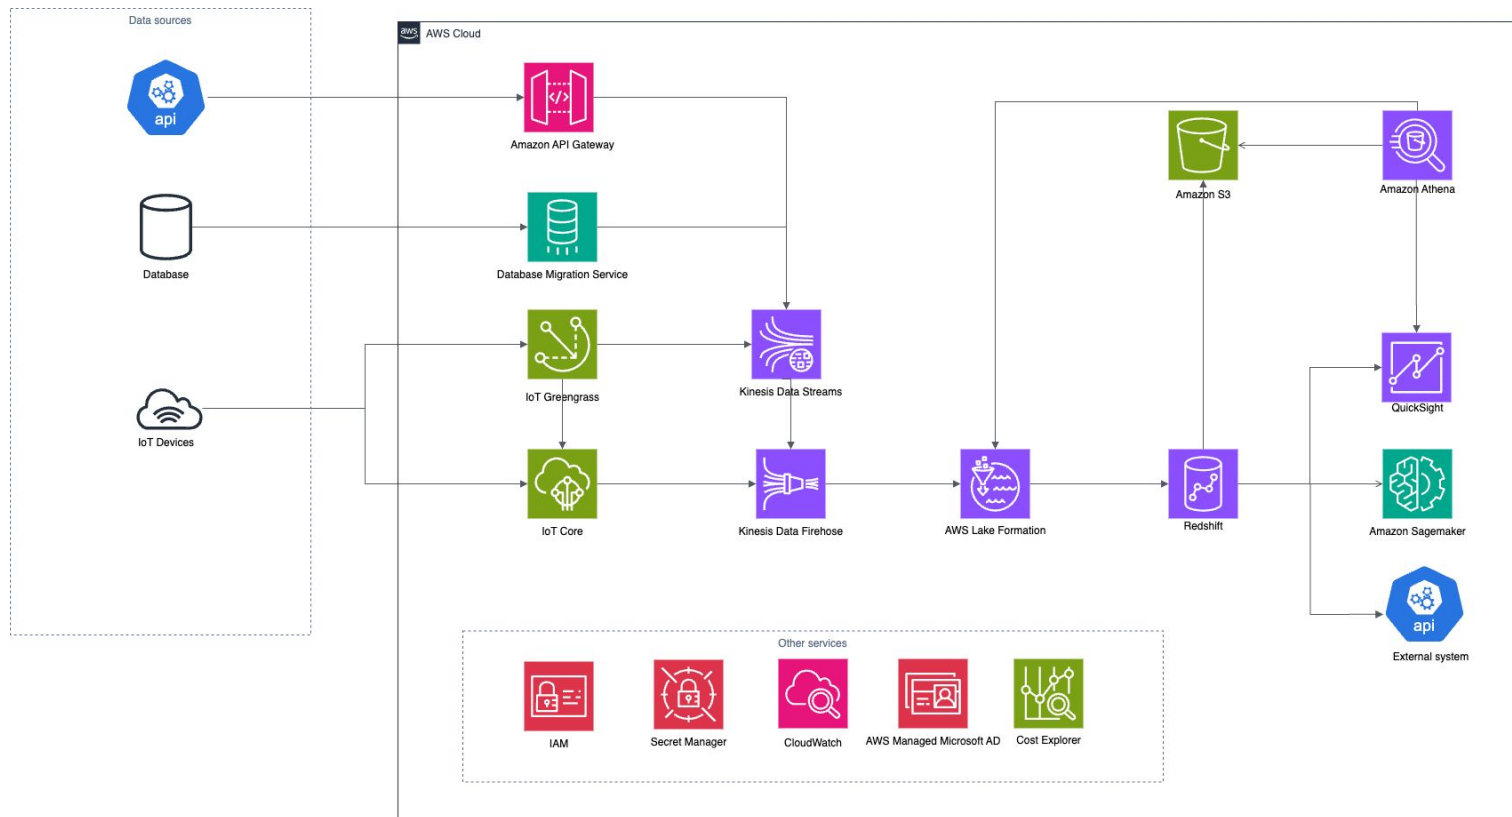

- Often includes tools for building and deploying machine learning models, allowing your organisation to optimise the value of your data.

6

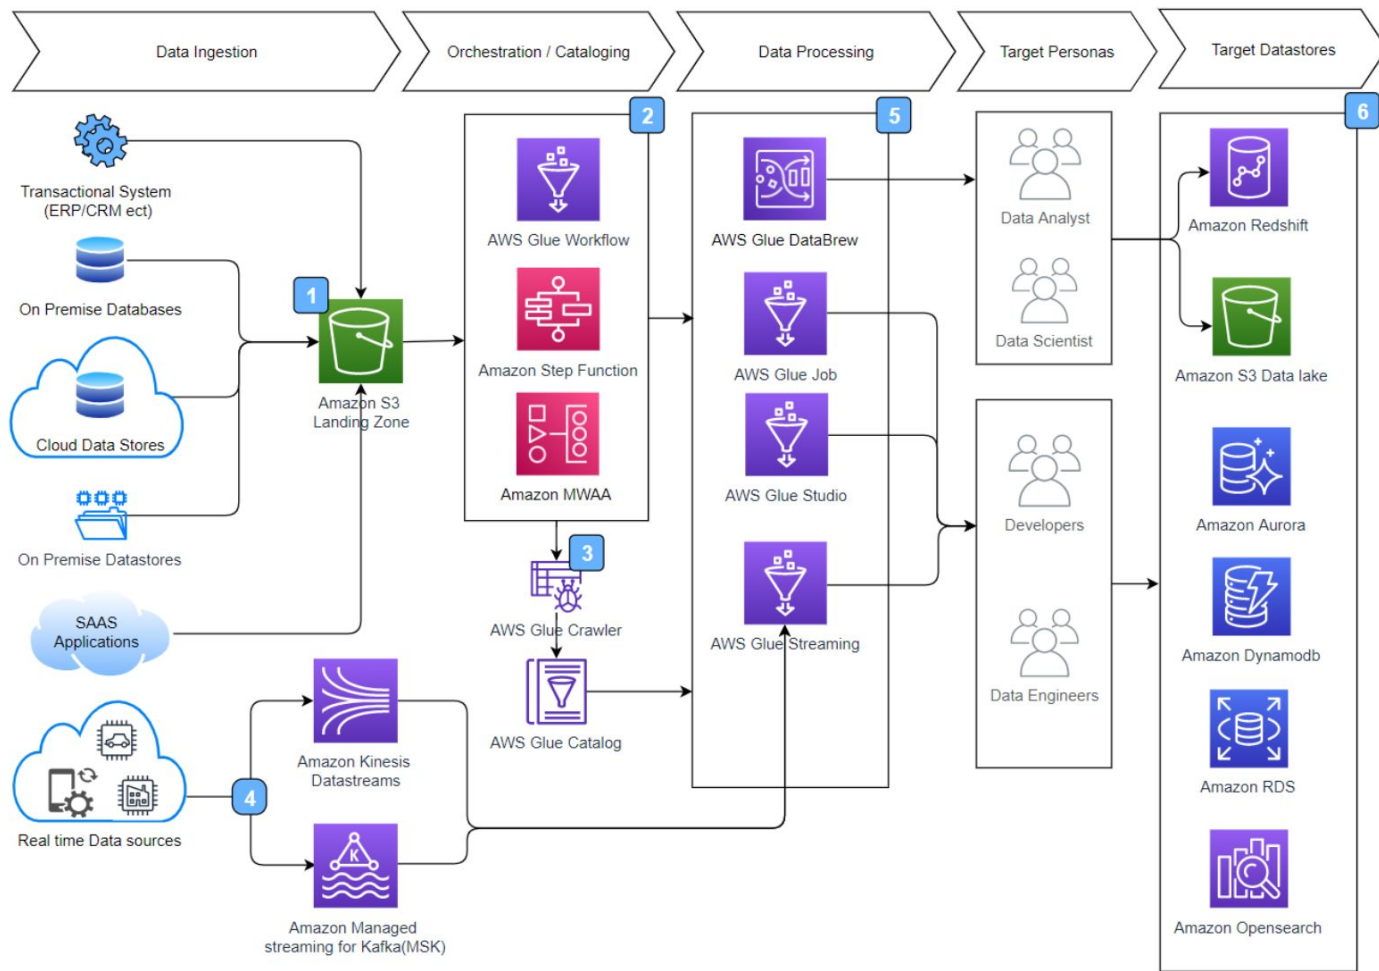

Collaboration

- Tools for collaboration and information sharing, making it easier for teams to work together and make data-driven decisions.

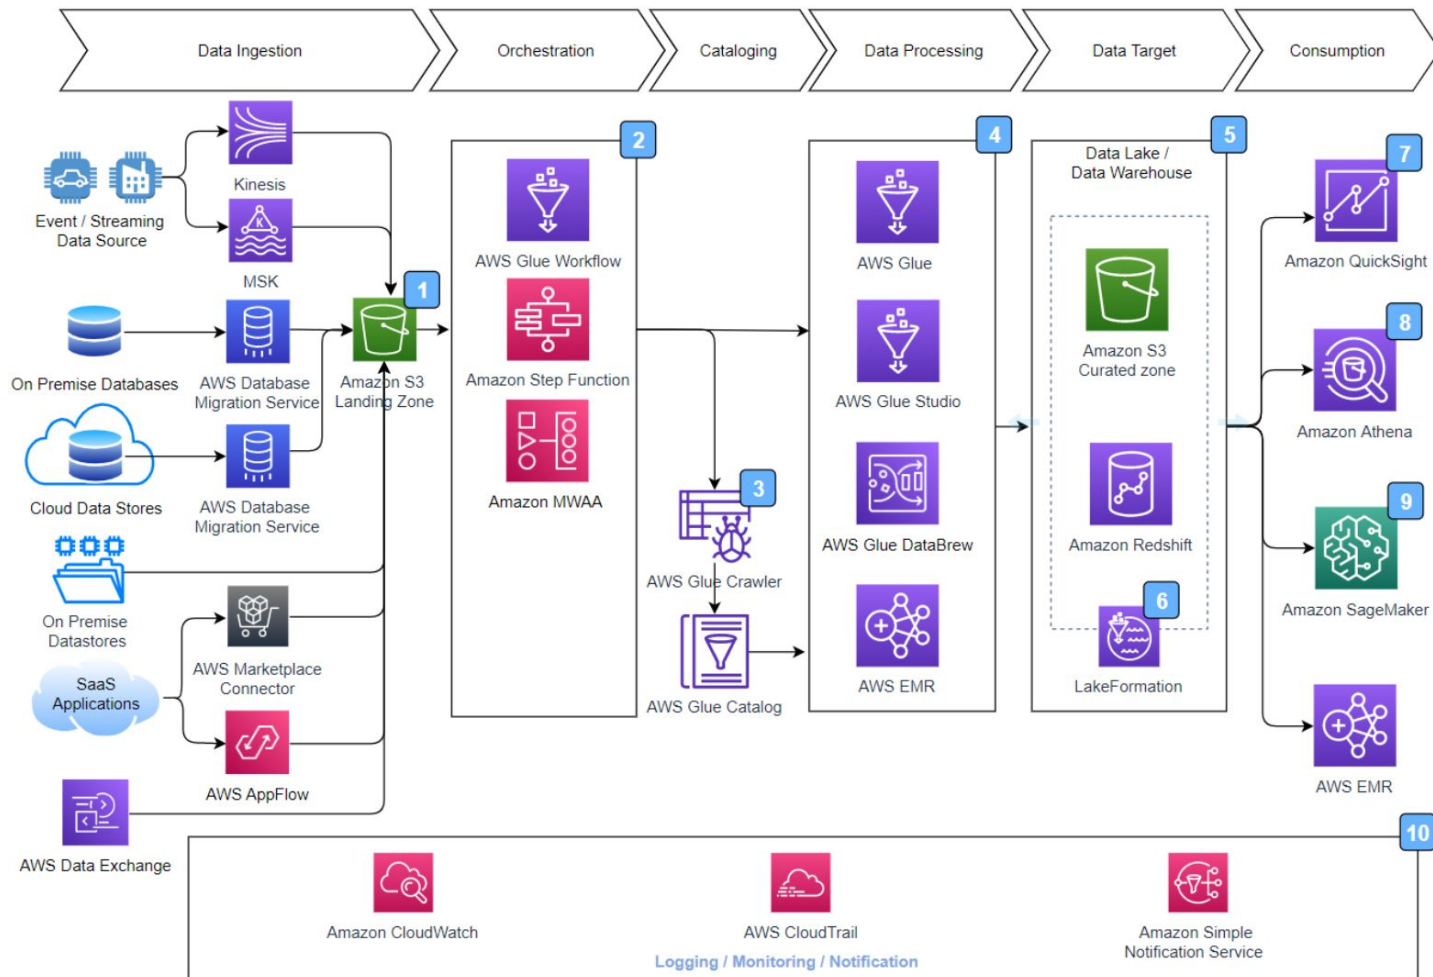

Proposed Architecture - Data Platform

ETL on AWS (Building a Data Pipeline on AWS)

ETL on AWS (Building a Data Lake on AWS)
